

Amcor Flexibles St-Cesaire | St-Cesaire, Quebec

PROJECT: Amcor | **AREA:** Packaging Facility

PRODUCTS: Stonclad HT, Stonkote HT4, Stonseal GS7

World-renowned innovation and customer service has seen Amcor expand from its Australian heritage to now serve markets around the globe. As the world's largest packaging company, Amcor offers exclusive and innovative solutions that are at the forefront of the packaging industry.

THE CHALLENGE:

This packaging facility underwent a large scale safety and organization program. In order to ensure security between the workers and shipping department, the client requested a two colour theme, separated by yellow safety lines. Light blue areas indicate a safe work zone, and dark blue is strictly a shipping area. It is mandatory for workers entering the dark blue areas to ensure they are wearing an orange safety vest.

THE STONHARD SOLUTION:

To meet the requirements for a seamless, high performance flooring system with unique design prerequisites, the Stonhard team recommended a system of Stonclad HT, two coats of Stonkote HT4, and one coat of Stonseal GS7, in the custom colours requested.

Stonclad HT cures to an extremely hard, impact resistant mortar which exhibits excellent abrasion and wear resistance and superior chemical resistance. Stonkote HT4 is specifically formulated to provide outstanding protection from a wide range of chemicals while increasing abrasion resistance and cleanability. Stonseal GS7 is designed to improve cleanability, and increase stain and abrasion resistance.
