

Durham College - Centre For Food | Oshawa, Ontario

PROJECT: Centre For Food | **AREA:** Atrium, Hallways, Wine Tasting Lab, Main Lecture Theatre, Washrooms

PRODUCTS: Stontec EFC, Stonseal GS7 Flat

Opening in October 2013, the Centre For Food is a post-secondary facility focused on the field-to-fork concept, which is based on the harvesting, storage, processing, packaging, sale and consumption of food - in particular, the production of local food for local consumers. The curriculum, faculty expertise and state-of-the-art facilities and equipment required to implement this concept have been built into the program.

THE CHALLENGE:

The entire Centre For Food facility was designed to work with its rural setting and merge with the natural landscape. It was vital for the flooring system to be functional, from an educational facility requirements standpoint, but also complement and enhance all of the other interior finishes.

THE STONHARD SOLUTION:

The Stonhard team recommended a system of Stontec EFC and Stonseal GS7, which was installed in the atrium, hallways, wine tasting lab, main lecture theatre, and in the washrooms. Stontec EFC is a decorative, high performance, seamless flooring system that is suitable for application over properly prepared concrete.

Stonseal GS7 combines superior chemical and abrasion resistance with excellent adhesion and resistance to ultraviolet light. As a general service urethane coating, Stonseal GS7 is designed to improve cleanability, and increase abrasion and stain resistance.
